

# Working with Osterholm B.V.

Contracting and VAT notes for clients in Ireland

Osterholm B.V. is a Netherlands-based IT services company (owner: Bruno Samueli) providing Java / Spring Boot / Kubernetes and AI-assisted development, delivered remotely. Engaging us is straightforward and follows the standard EU cross-border B2B model. The points below answer the questions that usually come from procurement and finance.

## 1 · Engagement — an independent B2B service, no Irish entity needed

---

We deliver as an independent service through Osterholm B.V. under a service contract: defined, deliverable-based work, using our own equipment and methods. For remote delivery there is no need for an Irish company, umbrella, or payroll on your side — you contract our Dutch company and receive our invoices.

## 2 · VAT — reverse charge on cross-border B2B services

---

As a business established outside Ireland, Osterholm B.V. invoices without VAT. Under the general B2B place-of-supply rule, your Irish business accounts for Irish VAT on the purchase through the reverse-charge mechanism on its VAT3 return and — where you have full input-deductibility — reclaims it in the same return, so the entry is cash-neutral. This is the standard, prescribed mechanism for cross-border B2B services within the EU, not a special case. (Relevant Contracts Tax (RCT) does not apply: it is confined to construction, forestry and meat processing.)

## 3 · Status — a genuine business, not employment

---

We operate as a genuine independent business: our own company, multiple clients, our own tools, and no integration into your organisation or reporting line. The engagement is a B2B service, not employment. A service agreement documents this, and we can provide a model on request.

## 4 · Documents on request

---

Company registration (KvK) extract · VAT number NL864925888B01 · model service agreement · insurance details.

*This note is general information and not tax or legal advice. Your adviser or the Revenue Commissioners can confirm the points for your specific circumstances.*
