PROFILE

Java engineer specializing in Spring Boot and Kubernetes on the modern JVM (Java 25), with AI-assisted and agentic development built into daily work — LLM features via LangChain4j, code generation through Claude Code, Copilot and Ollama-hosted agents. Strength in the work that has to be right the first time: migrating live systems across major Java versions without data loss, decomposing monoliths into independently deployable services, and keeping order-processing state consistent across message queues and databases.

Delivers in Scrum / Kanban teams, on-site or remote, across NL, DE and AT — including near-shore (Portugal, Bulgaria) and global (UK, India) collaboration. German fluent, Dutch working, English native.

NOTABLE CLIENTS

Across telecom, banking, insurance, public sector, utilities and academic publishing — A1 Telekom Austria, UniCredit, Allianz, the German Federal Employment Agency (Bundesagentur für Arbeit), Enel (Italy's national power utility) and John Wiley & Sons.

SELECTED ACHIEVEMENTS

- **Java 7 → 11 LTS migration of a live order-tracking monolith.** Re-platformed onto Tomcat 9, added Spring Security, migrated Spring 5 → 6 (XML to Java config) and EhCache 2 → 3, and rebuilt the front end (Primefaces 10) — without interrupting wholesale order processing.
- **Monolith → microservices.** Staged the decomposition of a Spring monolith into independently deployable Spring Boot services on Docker / Kubernetes, sequenced to avoid downtime in a production order system.
- **Cross-system state consistency.** Used Spring event listeners plus scheduled queue and database pollers to keep order states in sync and trigger downstream post-processing, closing data-consistency gaps in a high-volume pipeline.
- **Field-operations tooling.** Built a TypeScript / React SPA for fibre-optic availability lookup and embedded an in-house Angular geodata app — rewriting the geodata response — to drive service-vehicle route optimization for field technicians.
- **AI / agentic R&D (self-directed).** Built a Kafka-sourced web dashboard with LLM features via LangChain4j, generating Java / Python / Node code through agentic tooling (Claude Code, GitHub Copilot, Ollama-hosted Qwen3-Coder, Kimi, Nemotron).

TECHNICAL SKILLS

Core: Java SE 8 → 25 LTS, Spring & Spring Boot (Security, Batch, Data, Scheduling), Jakarta EE, REST & GraphQL, JPA / Hibernate, Kotlin

Messaging & async: Apache Kafka, ActiveMQ, Spring events & listeners

Front end: TypeScript, React, Next.js, Angular, Primefaces (JSF)

Python & web: Python, FastAPI (MCP, data, web services)

Cloud & containers: Docker, Kubernetes, Helm, Kong; AWS (EKS, EC2, Lambda, S3, SNS)

Build & CI/CD: Maven, Gradle, Git, GitHub Actions, Jenkins, BitBucket, GitOps

Testing: JUnit, Mockito, AssertJ, PowerMock; Selenium, Cucumber; Jest, React Testing Library

Data stores: Oracle, PostgreSQL, MongoDB, ScyllaDB, DB2

Observability & QA: ElasticSearch, Kibana, Grafana, AppDynamics, SonarQube

AI-assisted dev: Claude Code, GitHub Copilot, LangChain4j, Ollama-hosted agents

Practices: Clean Architecture, DDD, SOLID, DRY, TDD / BDD, design patterns; Scrum, Kanban

EXPERIENCE

Independent R&D (self-directed) — Osterholm B.V.

08.2024 – present

Remote (NL) · AI-aided design and development of a Kafka-sourced web dashboard

Stack — Java 25, Kotlin, LangChain4j; Spring Boot 3/4; React / TypeScript, Next.js; Python, FastAPI; Kafka 4.0; PostgreSQL, ScyllaDB, GraphQL; Docker, Kong, Kubernetes, Helm; GitHub Actions, GitOps; ElasticSearch, Grafana

- Built LLM-backed features into application output with LangChain4j.

- Generated Java, Python and Node.js code with agentic tooling (Claude Code, GitHub Copilot, Ollama-hosted models).

Senior Java Applications Developer — A1 Telekom Austria AG

02.2020 – 06.2024

Vienna, AT (hybrid / remote) · Wholesale order-tracking system — Java 7 → 11 LTS migration, then staged decomposition of the Spring modulith into Spring Boot microservices on Kubernetes

Stack — Java 11/17, Spring 5/6 (Security, Batch, Scheduling, Data), Spring Boot 2/3, JPA / Hibernate 5, SOAP / REST, Primefaces 10, Tomcat 9, TypeScript / React; Oracle 12c, EhCache 3, Kafka 3.6, ActiveMQ, Azure SQL; Docker, K3d, Kubernetes; Maven, Gradle, BitBucket, Jenkins, GitOps; SonarQube, AppDynamics

- Split the modulith backend into independently deployable Spring Boot microservices on Docker / Kubernetes.
- Built a TypeScript / React SPA for fibre-optic availability lookup; embedded an in-house Angular geodata app for field-technician route optimization.
- Kept order-processing states consistent via Spring event listeners and scheduled queue / database pollers.
- Handled production incidents; scoped, packaged and documented data corrections and migrations; ran feasibility studies and effort estimates; conducted code reviews and paired with junior developers.
- Earlier in the engagement, migrated the Java 7 application to Java 11 / Primefaces 10 on Tomcat 9; added Spring Security; full front-end overhaul.
- Migrated Spring 5 → 6 (XML config to Java config) and EhCache 2 → 3; configured Hibernate query and page caching.
- Secured plaintext configuration credentials by moving them into an open-source password vault.

Java AWS Developer — 11th Dimension GmbH

03.2018 – 12.2019

Munich, DE (remote) · Web interface for a natural-language dictionary

Stack — Java 8, Kotlin, Angular / TypeScript; Spring Boot 2; AWS (EKS, EC2, Lambda, S3, SNS); Oracle 12c, MongoDB 4; Docker, K3d; JUnit 4, Mockito, SonarQube

- Provisioned and queried AWS instances; wrote AWS CLI scripts to automate installs, reduce incidents and improve delivery speed.

Senior Java API Test Developer — Bundesagentur für Arbeit

10.2017 – 02.2018

Nuremberg, DE · COLIBRI migration — shared API and acceptance-testing solutions across teams

Stack — Java 8, JUnit 4, Mockito, PowerMock, Cucumber / Gherkin, JaCoCo, SonarQube; WebLogic 12.2, Oracle 11g; BitBucket, Jenkins

EARLIER ENGAGEMENTS (2007 – 2017)

- **SOA / Integration Developer — Allianz (AMOS / Allianz Technology SE), Vienna, AT · 02.2015 – 06.2017.** SOAP message processing on JBoss Fuse / SOA5 (Apache Camel, Drools, DB2); knowledge transfer to off-shore teams (India).
- **JEE Developer — UniCredit Business Integrated Solutions, Munich, DE · 09.2012 – 09.2014.** Web-based Basel III regulatory-compliance reporting (JBoss EAP 6, JPA / Hibernate, JSF, JMS, Oracle).
- **Spring Web Technical Lead — Cerved Group, Padua, IT · 07.2011 – 05.2012.** Web-based contract and customer management (Spring MVC / Security / Batch, MyBatis, Oracle).
- **JEE Applications Developer — Consorzio Triveneto Bassilichi S.p.A., Padua, IT · 09.2007 – 01.2011.** Web-based contract and customer management; PKI-authenticated banking and file-transfer services.
- Earlier roles include John Wiley & Sons and Enel — details on request.

CERTIFICATION & EDUCATION

- Software Architecture Training Program & Certification — Global Dev Experts (online), 2024 – 2025.
- Executive Master in Project Management — Il Sole 24 ORE Business School, Milan, 2010 – 2011 (PMI, PRINCE2, IPMA).
- B.A., Columbia University, New York — formal logic, algebra, analysis, differential equations, philosophy. Prior undergraduate mathematics at Université Paris 5 René-Descartes.

LANGUAGES

Working languages: English (native), German (fluent), Dutch (intermediate). Also French and Italian (near-native).
